

Ministry of Health & Family Welfare
Government of India

Bacteria are becoming resistant to antibiotics because

- 01 People take antibiotics when it is not required
- 02 People do not take disease specific antibiotics or dose
- 03 People do not complete the course of antibiotics

ACT NOW

- 1 Take antibiotics only when advised by doctor & do not use old prescription
- 2 Complete full course of antibiotics as directed by doctor
- 3 Do not take antibiotics for common cold, flu, running nose or viral infection
- 4 Wash your hands to prevent infection & avoid the need of antibiotics
